Alberta Economic Accounts 2001

PREFACE

This publication has been prepared by Alberta Finance, Statistics to provided detailed statistics about the Alberta economy. These accounts include revisions to some series back to 1971 to take into account revised data and methodology. There are several major changes in this year's publication. First of all, the major indicator of real growth is now the Chain-Fisher Index. This method was chosen so that constant dollar estimates would be consistent with those produced by Statistics Canada. Secondly, we have converted the GDP by Industry Tables to the North American Industrial Classification System (NAICS), as well as changed the totals to basic prices, rather than factor cost. Also, the treatment of fees for motor vehicles and hunting and fishing licences has changed. Previously, these were treated as personal expenditure. In these accounts, they are now classified as transfers from persons to government. These changes affect personal expenditure, government expenditure, indirect taxes on production and GDP. For further details of these changes, see the data revision section.

In preparing these estimates, Alberta Finance relies on input data from Statistics Canada and other provincial government departments. We would like to thank Statistics Canada and the various departments for their co-operation and assistance in providing us with data and assistance with the Chain-Fisher methodology.

This publication contains data for 1971 to 2001. All data for this publication are available on diskette, CD Rom or by E-mail at a cost of $50. Each diskette contains all tables from the economic accounts that are normally available on ASIST (Alberta Statistical Information System), including some data not in this publication.

Enquiries concerning the publication, requests for additional copies, a copy of the diskette/CD Rom or information on ASIST retrievals should be directed to:

Alberta Economic Accounts 2001

INTRODUCTION

The first section of this publication provides a brief description of how the Alberta economy performed in 2001, a description of the data revisions that have been incorporated into the publication this year, and an explanation of the basic concepts underlying the economic accounts and their measurement.

The second section contains data tables for the income and expenditure accounts in both current and constant (1997) dollars, plus detailed tables that present the accounts by industry, provide a breakdown of exports, and describe consumer expenditures and personal income. The final section provides a brief definition/explanation of terms that appear throughout the economic accounts publication.

Alberta Economic Accounts 2001

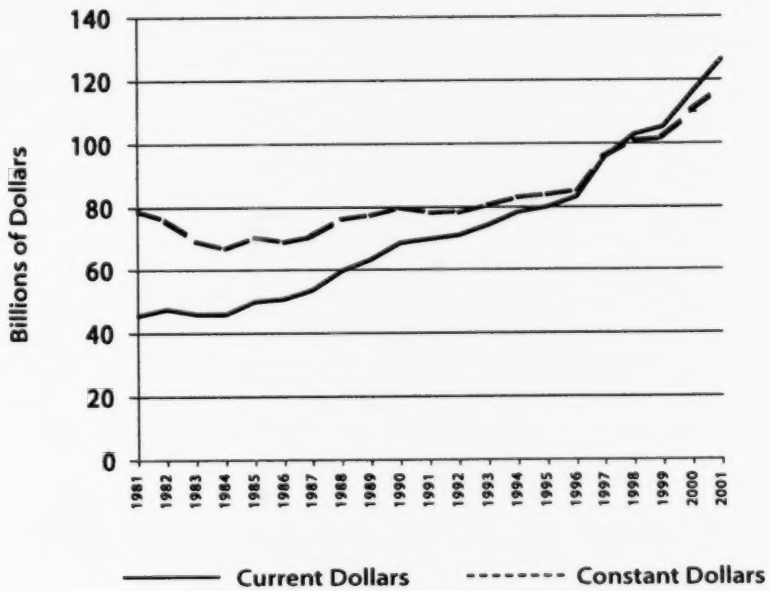
THE ALBERTA ECONOMY IN 2001

The value of goods and services produced in Alberta, as measured by GDP, was $150.5 billion (current dollars) in 2001, an increase of 5.1% from the 2000 level. When converted to constant (1997) dollars, GDP grew by 2.0%.

FINAL DOMESTIC DEMAND

The growth rate for GDP is often affected by swings in the balance of trade, or jumps in the statistical discrepancy, so analysis of Final Domestic Demand (FDD - the sum of consumer and government expenditures, plus business and government investment) gives a truer picture of the domestic economy. In 2001, FDD grew by 8.7% in current dollars and by 6.8% in chained constant (1997) dollars. These numbers show that Alberta was booming domestically and thus imported many goods and services. Meanwhile, the slowdown in the US economy resulted in a marked slowdown in exports. Overall, the trade balance dropped significantly, resulting in the growth of 2% in real GDP compared to 6.8% in FDD.

FINAL DOMESTIC DEMAND

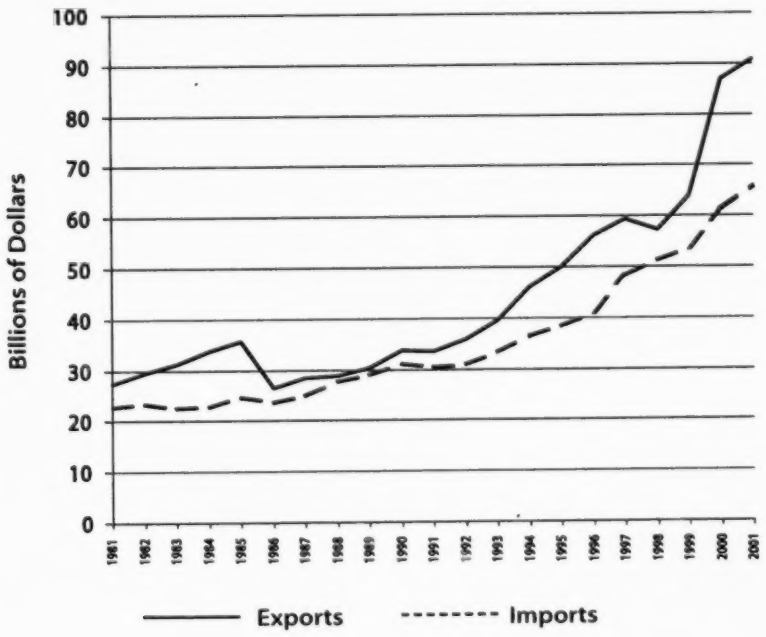


EXPORTS AND IMPORTS

Exports out of Alberta (which includes international and interprovincial exports) slowed to a growth of 4.4% in current dollars and by 0.6% in constant chained dollars in 2001. This was a big drop from the growth of 36.3% (5.4% real) in 2000. Interprovincial exports grew by 2% (-2.2% real) in 2001 compared to 29.5% (6.8% real) in 2000. International exports were up 5.6% (2% real) in 2001, which is also down significantly from the 41.8% (4.3% real) growth attained in 2000. International manufacturing exports were down -3.4% (-6.0% real) in 2001 after jumping by 12.5% (6.5% real) in 2000. More details on exports can be found in Tables 18 and 19.

The value of imports into Alberta was up 7.7% in current dollars (5.4% real) compared to a growth of 13.7% (11.5% real) in 2000. The net effect on Alberta's trade balance, was very significant. In 2001, the real trade balance was $5.1 billion compared to $7.9 billion in 2000, a 35% drop. In current dollars, the trade balance was down 3%.

TRADE BALANCE (CURRENT DOLLARS)



HIGHLIGHTS OF THE EXPENDITURE ACCOUNT IN CONSTANT DOLLARS

(All highlights in this section are in chained constant (1997) dollars)

PERSONAL EXPENDITURE ON GOODS AND SERVICES

Consumer expenditures grew by 5.3% in 2001, up marginally from the 5.2% in 2000. Expenditures on durable goods were up 8.7% in 2001 - down from the 9.6% growth in 2000, but still very strong. Expenditures on services were up 3.9% in 2001 compared to the increase of 4.5% in 2000. Consumer expenditures on semi-durable goods were up 7.6% compared to 7.7% in 2000, while expenditures on non-durable goods grew by 5.5%, (3.1% 2000). Further details on personal expenditures can be found in Tables 15 and 16.

GROSS FIXED CAPITAL FORMATION

Combined business and government investment grew by 11.2% in 2000 after growing by 16.9% in 2000. Business investment in machinery and equipment remained strong with a growth of 13.3% after climbing 14% in 2000. Investment in residential structures was up 6.5% after growing only 1.9% in 2000, while investment in non-residential structures grew by 9.2%, down from the 16.9% growth in the previous year. Total government capital formation was up a healthy 38.5% after growing 16.9% in 2000.

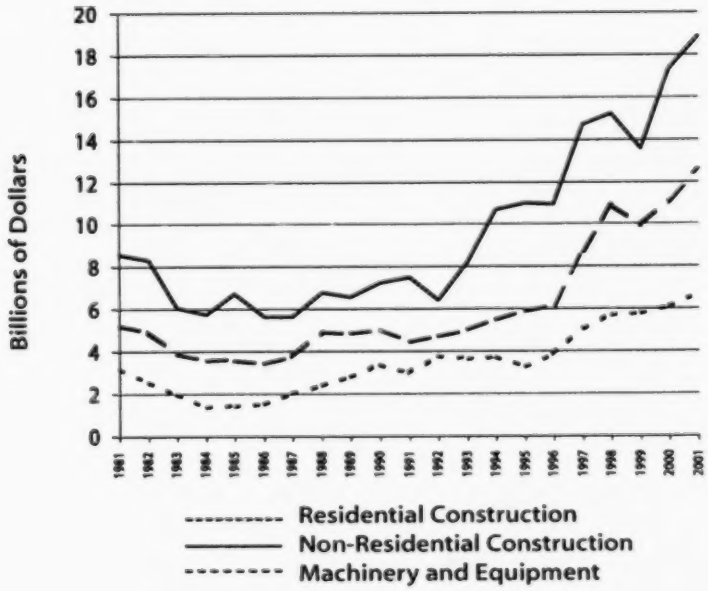
GOVERNMENT EXPENDITURES ON GOODS AND SERVICES

Government spending by all levels of government increased by 3.0% in 2001 compared to the growth of 3.5% in 2000.

INVENTORIES

There was a reduction of $328 million in non-farm inventories in 2001after business accumulated $382 million in 2000. Farm inventories dropped $615 million in 2001 after falling $100 million in 2000.

BUSINESS INVESTMENT (CURRENT DOLLARS)



HIGHLIGHTS OF THE INCOME ACCOUNT

(All highlights in this section refer to growth in current dollars)

WAGES AND SALARIES

Labour income increased by 7.8% in 2001 compared to the 10.6% growth in 2000. The construction industry had the highest rate of growth in 2001 (14.9%). This was followed by 9.5% growth in the information and cultural industries. Wages and salaries paid federal government workers fell 8.1%. This decline was due to the large wage settlement paid out in 2000. Further details on wages and salaries by industry can be found in Table 14.

CORPORATION PROFITS

Corporation profits were up 6.7% in 2001 after the record growth of 75.3% in 2000. Profits reached a level of $32.1 billion before taxes in 2001.

FARM INCOME

Accrued farm income jumped by over 228% in 2001 after dropping 39.1% in 2000. Accrued farm income is the sum of net farm income (which increased by over 173% as farm cash receipts grew by over 10%, while operating expenditures went up only 2.8%) and the adjustment to farm income, which went from negative $52 million in 2000 to negative $13 million in 2001.

OTHER INCOME

Investment income fell by 3.1% in 2001 after rising by 74.5% in 2000. Part of this decline was a reduction in the amount of royalties received by government. Indirect taxes less subsidies on products fell by 53.7% in 2001, mainly due to the large payouts of electricity and natural gas rebates, which were classified as subsidies.

PERSONAL INCOME

Personal income was up 7.6% in 2001 compared to the growth of 9.0% in 2000. Wages and salaries (paid to residents of Alberta, no matter where earned) grew by 7.9% in 2001 after climbing 10.6% in 2000. Accrued farm income was up 228% (down 39.1% in 2000), while unincorporated business income grew by 9.7% (4.8% in 2000). Personal investment income was up 0.6% (6.9% in 2000). After current transfers to government are deducted, personal disposable income was up 8.7%, compared to 10.3% in 2000.

More information on the components of personal income and personal disposable income is presented in Table 9, while comparisons with Canada are found in Table 10.

GROSS DOMESTIC PRODUCT BY INDUSTRY

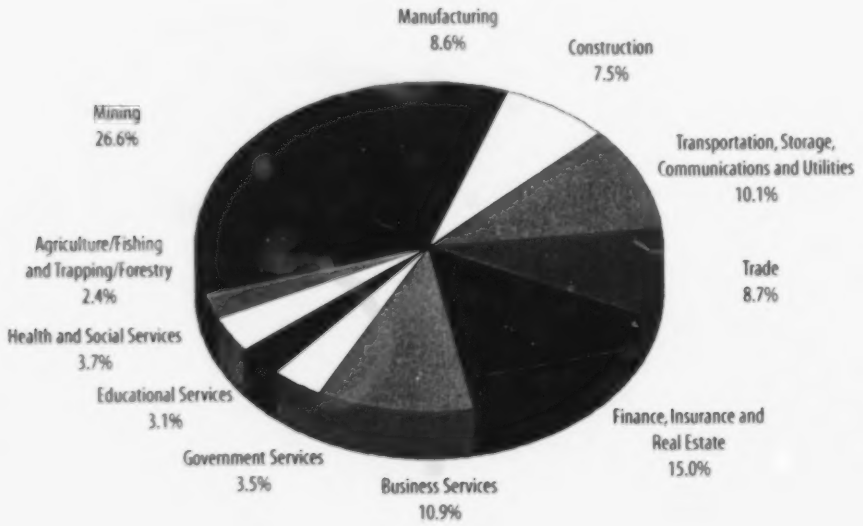
The mining (26.1%) and the finance, insurance, real estate, renting and leasing industries (14.7%) were the two largest industries in 2001. When combined, total services accounted for over 60% of GDP at Basic Prices.

In current dollars, other mining (16.1%) and information and cultural industries (13.5%) had the highest rates of growth, while crop and animal production (-3.2%) registered the biggest decline in 2001. In constant dollars, information and cultural industries (12.3%) and retail trade industries (7.2%) had the highest rates of growth, while crop and animal production industries (-8.0%) had the poorest performance.

Among manufacturing industries, the chemical industries made up 23.3% of the total manufacturing output produced in 2001. Food and beverage industries comprised 15.8% of the total, and the fabricated and primary metal industries had a 13.5% share.

In current dollars, machinery and transportation equipment industries (21.8%) and the non-metallic mineral products industries (6.5%) had the highest rates of growth in 2001. Textiles, clothing and leather products industries (-12.6%) and computer, electronics, electrical equipment, appliance and component industries (-11.5%) had the worst performances during the year.

ALBERTA GDP BY INDUSTRY - 2001

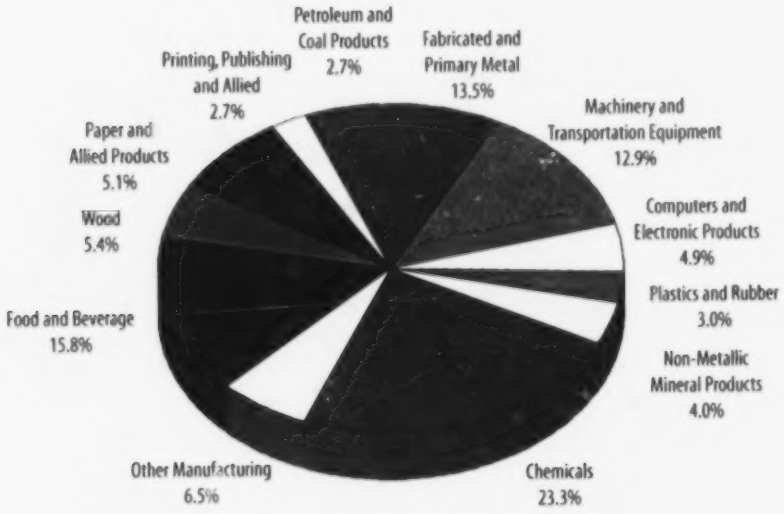


GDP at Factor Cost
$147.8 billion

In constant dollars, machinery and transportation equipment industries (18.4%) and the fabricated and primary metal products industries (8.2%) had the highest rates of growth. Textiles, clothing and leather products industries (-13.5%) and computer, electronics, electrical equipment, appliance and component industries (-12.1%) had the biggest declines during 2001.

Comparisons of Alberta's GDP estimates between 2000 and 2001 are presented in the summary table on the next page. Detailed data are provided in Tables 1 to 26.

MANUFACTURING INDUSTRIES - 2001



Petroleum and Coal Products 2.7%
Fabricated and Primary Metal 13.5%
Printing, Publishing and Allied 2.7%
Machinery and Transportation Equipment 12.9%
Paper and Allied Products 5.1%
Computers and Electronic Products 4.9%
Wood 5.4%
Plastics and Rubber 3.0%
Food and Beverage 15.8%
Non-Metallic Mineral Products 4.0%
Other Manufacturing 6.5%
Chemicals 23.3%

Total
$12.4 billion

SUMMARY TABLE

ALBERTA GROSS DOMESTIC PRODUCT, SELECTED COMPONENTS
2000-01 ***(millions of dollars)***

Expenditure Account	Constant 1997 Dollars 2000	2001	Percent Change	Current Dollars 2000	2001	Percent Change
Personal Expenditure	56,566	59,567	5.3	60,309	64,868	7.6
Government Expenditure	17,708	18,243	3.0	18,664	19,630	5.2
Government Fixed Capital	2,504	3,468	38.5	2,531	3,521	39.1
Business Residential Construction	5,383	5,732	6.5	6,120	6,733	10.0
Business Non-Residential Construction	16,365	17,487	6.9	17,331	18,886	9.0
Business Machinery and Equipment	11,717	13,279	13.3	11,096	12,562	13.2
Final Domestic Demand	**110,091**	**117,528**	**6.8**	**116,051**	**126,200**	**8.7**
Exports out of Alberta	66,109	66,507	0.6	87,051	90,909	4.4
Imports into Alberta	(58,250)	(61,405)	5.4	(61,076)	(65,763)	7.7
GDP at Market Prices	**119,804**	**122,172**	**2.0**	**143,155**	**150,454**	**5.1**

Income Account	Current Dollars 2000	2001	Percent Change
Wages and Salaries	60,392	65,112	7.8
Corporation Profits	30,115	32,122	6.7
Interest and Misc. Investment Income	14,801	14,347	-3.1
Farm Income	235	772	228.5
Unincorporated Business Income	6,764	7,422	9.7
Indirect Taxes less Subsidies on Factors of Production	4,050	4,039	-0.3
Net Domestic Income at Basic Prices	**116,168**	**123,736**	**6.5**
Capital Consumption Allowances	22,080	23,777	7.7
GDP at Basic Prices	**137,410**	**147,795**	**7.6**
Indirect Taxes less Subsidies on Products	5,745	2,659	-53.7
GDP at Market Prices	**143,145**	**150,454**	**5.1**

DATA REVISIONS

There are several major changes to this year's publication. Firstly, we are now using the **Chain-Fisher method of measuring real growth.** The reason for using this method is that both the Canadian and US Systems of National Accounts have adopted this measure. Chain-Fisher measures of growth eliminate most of the bias found in the Laspeyres fixed-weighted (the old method) measures that occur the further the estimates get from the base year. One drawback of using the Chain-Fisher measures of growth is that the components do not add to totals. For this reason, we have included a contributions to percent change table for each Chain-Fisher table. For further details on Chain-Fisher, please consult Statistics Canada's website. For those users who still wish to use the old indexes, they are presented at the back of the publication.

The **GDP by industry tables** have been completely overhauled. Firstly, the total is now GDP at Basic Prices, rather than Factor Cost. This change puts our estimates on the same basis as Statistics Canada. Secondly, the industry breakdown is now based on the North American Industrial Classification System (NAICS) as opposed to the 1980 SIC basis used last year. Our estimates are based on Statistics Canada's values released in the spring of 2002. As Statistics Canada has published current dollar estimates only for 1997 and 1998, we have "inflated" their constant dollar estimates for 1999 to 2001 to estimate current dollar values. We then adjusted these totals of GDP at Basic Prices so that they match our estimates obtained through the income account by incorporating a statistical discrepancy – see Table 2. Their constant dollar estimates were calculated using fixed weighted (1997=100) indexes. We have recalculated the totals using a chain-fisher index. Users will note that the industry level data is the same for both the fixed weighted and the chain-fisher tables, only the totals are affected in the calculations. As Statistics Canada only has estimates for 1997 to 2001, we have linked the numbers back to 1971 using the growth rates from the 2000 Alberta Economic Accounts, which were based on the 1980 SIC. Consequently, if new NAICS data are produced by Statistics Canada in the future, we will revise the numbers presented in these tables.

The treatment of fees for motor vehicles and hunting and fishing licences has changed. Previously, these were treated as personal expenditure. In these accounts, they are now classified as transfers from persons to government. These changes affect personal expenditure, government expenditure, indirect taxes on production and GDP.

The methodology to estimate corporation profits that was introduced in 1999 due to lack of detailed industry information at the Canada level had to be continued for the estimates for 2000 and 2001. As a result of these changes, revisions to the estimated level for profits for 1999 to 2001 could result whenever the detailed industry information becomes available.

The table on Mid-Year Net Capital Stock, by Industry has been eliminated from this publication. If users require this information, they should contact Alberta Finance, Statistics.

ECONOMIC ACCOUNTS - CONCEPTS AND MEASUREMENT

A business monitors its performance by a set of financial statements that records, in dollar terms, its value of transactions over a period of time. Similarly, the economic performance of a province is measured by economic accounts, which record the value of transactions carried out by all persons, businesses, governments and institutions.

There are many uses and applications of economic accounts data. Some uses include: current economic analysis, forecasting, background to budget preparations, examinations of economic growth, model building, structural analysis and education.

Some of the more commonly used terms are:

Gross Domestic Product (GDP) - This is a measure of the total value of production within the boundaries of the province, regardless of who owns the factors of production (land, labour and capital).

GDP at Market Prices - is a measure of GDP based on the earnings of the factors of production and the non-factor costs of production (e.g., indirect taxes less subsidies on products).

GDP in Current Dollars - is a measure of GDP calculated using current year prices and quantities. This measure is sometimes referred to as GDP in "nominal" dollars.

GDP in Constant Dollars - is a measure of GDP calculated using current volumes and base year prices. In these accounts, the base year is 1997. This measure is used to estimate what growth would be without the effects of price change and is often referred to as "real" GDP.

GDP at Basic Prices - is a measure of GDP based on the earnings of the factors of production plus indirect taxes less subsidies on these factors of production. This is the measure of GDP used in the GDP by Industry estimates in current and constant dollars (Tables 11 and 12).

Final Domestic Demand (FDD) - is a measure of how the economy performs without counting external transactions (exports, imports) or inventory changes. FDD is derived by adding consumer and government expenditures plus business and government investment. FDD is measured in both current and constant dollars.

Gross National Product (GNP) - is a measure of the total income accruing to the residents of a region. The difference between GDP and GNP is that GDP measures the value of production within the province, no matter who owns the factors of production, whereas GNP is a measure of the income of the residents of the province. GNP is derived from GDP by subtracting investment income paid to non-residents and adding investment income received from non-residents. Presently, there is no way to measure investment income paid to and received from other provinces, so there is no measure of GNP available for Alberta.

Other definitions related to the components of these terms are presented in the appendix.

Table 1A: Comparison of Gross Domestic Product, Alberta and Canada in Current Dollars

Year	Gross Domestic Product		Percentage Change in GDP		Alberta GDP as Percentage of Canada	Per Capita GDP		
	Alberta	Canada	Alberta	Canada		Alberta	Canada	Ratio

DEFINITION OF TERMS

This section provides a short definition or explanation of terms, which appear in the accounts. Additional detail can be obtained from either the U.N. System of National Accounts or the National Income and Expenditure Accounts (NIEA) of Canada. Both sources are identified below:

The following abbreviations are used in this section:

1. NIEA
Dominion Bureau of Statistics. *National Income and Expenditure Accounts, 1926-1956* Ottawa: Queen's Printer, 1962. Cat. No. 13-502.

2. NIEA, VOL. 1
Statistics Canada. *National Income and Expenditure Accounts, Volume 1* (The Annual Estimates, 1926 - 1974). Ottawa: Information Canada, 1976. Cat. No. 13-531.

3. NIEA, Vol. 2
Statistics Canada. *National Income and Expenditure Accounts, Volume 2* (The Quarterly Estimates, 1947 -1974). Ottawa: Information Canada, 1976. Cat. No. 13-533.

4. NIEA, Vol. 3
Statistics Canada. *National Income and Expenditure Accounts, Volume 3* (A Guide to the National Income and Expenditure Accounts, Definitions - Concepts - Sources - Methods). Ottawa: Information Canada, 1975. Cat. No. 13-549E.

5. S. C.
Statistics Canada. When followed by a number, it refers to a specific Statistics Canada catalogue.

6. SNA
United Nations. *A System of National Accounts.* Studies in Methods, Series F No. 2 Rev. 3. New York: United Nations, 1968.

Accrued Net Income of farm operators from farm production:
This item shows cash receipts from the sale of farm products, the imputed value of goods consumed by farm families, supplementary farm payments, and the value of inventory changes (except depreciation on residential dwellings). Negative values occur when the value of depletion of inventories and operating expenses exceeds cash receipts and supplementary payments.

Adjustment on grain transactions:
The Canadian Wheat Board (CWB) makes payments to producers in the current year on crops delivered in previous years. As the Income Account is a measure of the earnings arising out of current production rather than actual cash receipts, adjustments have to be made. A second portion of this adjustment allows for the fact that the earnings of the CWB are calculated on the basis of the change in book values of inventories, whereas the required valuation of inventories for the Accounts is the value of physical change. A third portion was added to this adjustment beginning in 1987. This new adjustment adjusts farm subsidies from a cash to an accrual basis. Negative values

occur when CWB payments to farmers in a given year are higher than the actual value of grain produced in that year. That is, payments have been made for grain delivered in previous years.

Basic prices
GDP at Basic Prices is a measure of output attributed to the factors of production (land, labour and capital) plus indirect taxes less subsidies attributed to these factors of production. GDP at basic prices is derived from GDP at market prices by subtracting indirect taxes less subsidies on products.

Business sector:
This sector consists of all corporate and government business enterprises resident in Alberta. Problems arise due to the presence of multi-provincial corporations. However, a concerted effort has been made to resolve difficulties in this area using available data on an establishment basis (see Table 9).

Capital assistance:
An expenditure item of federal and provincial governments, capital assistance consists of grants to incorporated and unincorporated businesses with the aim of assisting construction of new facilities or the acquisition of new production machinery and equipment.

Capital consumption allowances:
Applicable to both government and business, this item has two components which at present are not completely separable: (1) an allowance for consumption of fixed capital (depreciation allowance) in the economy, and (2) various valuation adjustments arising from differences in the concepts of income and capital consumption as reflected in business accounting records and the corresponding concepts used in the National Accounts. The item is adjusted by adding capital outlays charged to current expense plus the claim portion of business and residential insurance and subtracting non-capital outlays charged to the capital account.

Chain Fisher Indexes:
Rather than rebasing the implicit price indexes used to estimate constant dollar GDP every five years, a chain index is used that links each year's constant dollar estimates to the previous year's values. The Chain-Fisher Index used in these accounts is the geometric mean of the Laspeyres Index and the Paasche Index. Because they are geometric averages, Chain Fisher Indexes are not additive.

Corporation profits before taxes:
This component in the accounts is calculated before deduction of income and excess profits taxes, depletion allowances, charitable donations, and before payments of dividends to non-residents. Due to the complexity of this item a more complete description and derivation of corporate profits can be found in National Income and Expenditure Accounts, Chapter 7, Statistics Canada, 1975, Catalogue No. 13-549E.

Current transfers:
Current transfers are defined as "transfers of income between transactors. The transfers are made from the current income of the payer and add to the current income of the recipient for such purposes as consumption expenditure" (SNA, Page 231). The main distinction between a transfer payment and the purchase of a good or service is that "there is no direct link between the payment and the services received" in the case of the transfer payment (SNA, Page 105).

Current transfers to business from persons:
This is the non-productive or transfer portion of interest on the consumer debt. It is equal to total interest on the consumer debt less the administrative portion.

Current transfers to government from persons:
Transfers to Government includes "Direct Taxes" and "Other Current Transfers to Government". See the relevant headings for further explanation of these terms.

Current transfers to non-residents from persons:
This includes personal remittances to non-resident governments, corporations, and persons.

Current transfers to persons from business:
Payments classified under this heading refer to charitable and other contributions from corporations to persons and unincorporated business and to bad debt allowances, that is "the amounts charged by businesses in respect to doubtful accounts, net of recoveries" (NIEA, Page 113).

Current transfers to persons from government:
An expenditure of the federal, provincial and local governments, these transfers encompass all direct payments from governments to persons. Included in this component are such items as family and youth allowances, unemployment insurance benefits, workers' compensation benefits, general welfare payments, old age security benefits, and Canada Pension Plan benefits.

Current transfers to persons from non-residents:
This refers to items such as pensions paid by foreign governments, cash payments by relatives or friends living in other countries, charitable and other contributions made by non-resident corporations.

Depreciation:
Depreciation is the actual wear and tear and obsolescence of fixed capital assets in the process of economic production. Depreciation is not measured directly - it is estimated indirectly by measuring Capital Consumption Allowances.

Direct taxes - business enterprises:
This item encompasses three components: general income taxes, mining and logging taxes and other direct taxes. These taxes are levied on profits as opposed to taxes on capital, on place of business or on sales, which are indirect taxes. These taxes are levied against private and government business enterprises and are collected by the federal and provincial governments.

Direct taxes - non-residents:
These are taxes levied by the federal government on payments to non-residents on such items as dividends, interest, royalties, management fees, etc.

Direct taxes - persons:
This component encompasses such items as personal income taxes and employer and employee contributions to the Canada Pension Plan. Direct taxes are mainly levies assessed against individuals that take some account of ability to pay and are collected by both the federal and provincial governments.

Exports and Imports of goods and services:
Exports of goods and services include receipts from exports of merchandise, freight and shipping credits earned, travel expenditures of non-residents in Alberta, and other earnings, especially receipts from business services

rendered to non-residents. Imports of goods and services include payments for imports of merchandise, freight and shipping charges incurred, travel expenditures of Albertans in the rest of Canada and abroad, and other payments, especially payments for business services rendered by non-residents. To date, it has not been possible to include Alberta transactions in freight and shipping, and business services with the rest of Canada. Therefore, for these categories, only those transactions with the rest of the world are included.

Final Domestic Demand (FDD):
This is a measure of the domestic activity in the province. It is the sum of personal and government expenditures plus gross fixed capital formation.

Government current expenditure on goods and services:
This component consists of the outlays of the federal, provincial and local governments and hospitals for goods and services. It includes general administrative expenses, such as wages and salaries, as well as outlays for goods and other services required in discharging governmental responsibilities. Thus, it consists of purchases from businesses and non-residents, wages and salaries of government employees, medical care expenditures, capital consumption allowances and other miscellaneous outlays.

Government sector:
This sector includes the transactions of all government departments and agencies at the federal, provincial, and municipal levels. Government enterprises, which are profit oriented, are included in the business sector. The government sector also includes hospitals. It should be noted that the government sector table does not necessarily reflect government economic transactions as they relate to accounting practices. These numbers thus differ from those presented in the "public accounts" of the different levels of government.

Gross domestic product (GDP) in constant dollars:
This is a measure of total production during a given time frame and a given geographical location, which is valued in prices for some base year. For Alberta, the constant dollar estimates are chained fisher volume indexes expressed in 1997 dollars.

Gross domestic product (GDP) in current dollars:
This refers to the value of total production within a given geographical area for a specific time period, and is measured in prices which prevail during the period being valued. It includes output that is produced by capital stock which is owned by non-residents of the region, but it does not include income received by residents on production which takes place outside the region. Thus GDP is strictly a measure of production within a specific region, regardless of ownership of the factors of production.

Gross fixed capital formation:
Government and business gross fixed capital formation is defined to include expenditures of government and business for new construction and new machinery and equipment. Expenditures of persons for new residential dwellings are also included, since individuals, in their capacity as homeowners, are treated as business enterprises. Only new construction and new machinery and equipment are included; purchases of land, used buildings, and second hand machinery and equipment are excluded since they do not represent current production of goods and services.

Gross capital stock:
Gross stocks are the cumulative value of gross investment in capital goods less cumulative discards.

Implicit price Indexes:
These are currently - weighted price indexes, which measure yearly changes in price as well as changes in expenditure patterns between items. They are calculated by dividing the current dollar values of the components of Gross Domestic Product by their deflated constant dollar series. In these accounts, the main implicit price indexes are the chain Fisher price indexes.

Indirect taxes:
These are taxes levied by the federal, provincial and local governments. Indirect taxes represent a part of the market price of goods and services which is not received by factors of production. They are imposed on the production and/or sale of goods and services or they may be levied in accordance with formulae which take account of certain capital holdings (e.g., real property tax). They may also take the form of charges for the right to engage in certain activities of a personal, professional, industrial or commercial nature. Indirect taxes include such components as the Goods and Services Tax (GST) beginning in 1991 and the manufacturers' sales tax (federal) for earlier years, retail sales taxes (provincial), customs duties, excise duties and taxes (including oil export charges), natural resource taxes, real property taxes, amusement taxes and profits of liquor boards. Indirect taxes, however, exclude the sales of oil and gas rights.

Indirect taxes on factors of production
This portion of indirect taxes includes those taxes paid on the production and import of goods and services. They are also levied on the costs of labour (e.g. employment taxes) and on the ownership of land (e.g. property taxes) and are payable regardless of the value of production generated.

Indirect taxes on products
These are the indirect taxes attributed to sales of goods and services. They include sales taxes, GST, fuel taxes, import duties and taxes on alcohol and tobacco.

Interest and miscellaneous investment income:
This component includes bond interest, mortgage interest, bank interest, royalties, investment income of life insurance companies, etc. This item is closely linked with investment income of persons, investment income of governments and interest on the public debt. The nature of these linkages is fully explained in National Income and Expenditure Accounts, Chapter 7, Statistics Canada No. 13-549E.

Interest, dividends and miscellaneous investment income of persons:
This category is a measure of the interest income of persons. It includes bank, mortgage and bond interest, both paid and imputed. It also includes royalties received by persons and dividends received on Canadian bond holdings. It does not include interest on the public debt nor interest on the consumer debt. In addition to the above, the investment income of life insurance companies and fraternal organizations is included in the figures. The series takes into account both interest and dividends received from the corporate and government business enterprise sector as well as the non-resident sector of the accounts.

Interest on the public debt:
This is an expenditure of all levels of government and hospitals. It encompasses all payments made in respect of their borrowed funds.

Inventories:
Value of physical change in inventories is defined as the change in the value of farm and non-farm business inventories (change in physical volume) valued at the average market prices of the period. It is necessary that the new change of business holdings of inventories during the year be included in the Gross Domestic Product to allow for that portion of current production which has not yet been sold (positive change in inventories), or to eliminate that portion of previous years' production which are included in sales of the current year (negative change in inventories).

Inventory valuation adjustment:
The inventory valuation adjustment is the difference between the value of physical change in inventory and the change in inventory book value. This adjustment is made to remove, from corporation profits and the net income of incorporated business, any unrealized gains or losses arising from the effect of price changes on holdings of inventories. Since the method of calculating farm income automatically eliminates such gains or losses, this adjustment is required only for business inventories and grain in commercial channels other than the Canadian Wheat Board.

Investment Income (government):
A revenue source for the federal, provincial and local governments and hospitals, investment income includes such items as interest on government-held public funds, interest on loans, advances and other investments, royalties and remittances from government enterprises.

Laspeyres (Fixed Weighted) Indexes:
These are the price indexes used to estimate constant dollar GDP based on expenditure patterns in an arbitrary base year. In these accounts, this base year is 1997. These prices are what were previously used to estimate the constant dollar estimates (Tables 21 to 26).

Market prices:
Gross Domestic Product at market prices is a concept that measures total production based on the earnings of the factors of production (factor cost) plus the non-factor costs of production (indirect taxes less subsidies on products). GDP at Market Prices also includes an indirect measure of depreciation called Capital Consumption Allowances. Since this is a measure of production, it does not include transfer payments (see Current Transfers).

Mid-year net capital stocks:
Mid-year net capital stocks are net stocks adjusted to the middle of each year. Net stocks are gross stocks less deductions of losses in value through physical deterioration and obsolescence.

Military pay and allowances:
This includes wages and salaries paid to members of the armed forces as well as supplementary payments such as employer contributions to pension funds. The value of uniforms, free medical examinations, and food supplied to personnel is included for years prior to 1966. The value of the provision of barracks to personnel is not included.

Miscellaneous investment income from non-residents:
Miscellaneous investment income from non-residents includes dividend, interest and business service payments to Alberta businesses. Business service payments include rent, royalties, advertising, research, insurance and management fees. For the provincial accounts there should be two components for payments from non-residents: payments from non-Canadians and payments from Canadians but

non-Albertans. Because the data for interprovincial payments are not available at present, the component "payments from Canadians but non-Albertans" is not estimated.

Net domestic income at basic prices:
This is the sum of the earnings of the factors of production, namely, land, labour and capital plus indirect taxes less subsidies on these factors of production. It is calculated on a domestic basis since these components are the earnings arising from production within the boundaries of Alberta.

Net income of non-farm unincorporated business including rent:
This item includes the net income of all non-farm unincorporated businesses covering almost every industry in the economy including the net income of independent professional practitioners, such as doctors, dentists, nurses, lawyers and engineers. It also includes the rental incomes of persons.

Non-resident sector:
This sector includes the transactions of goods and services between residents of Alberta and all persons, governments and business enterprises located outside the province. There is no specific table for this sector. Total transactions are shown as exports and imports in the consolidated expenditure account, while exports are broken into major groups in Tables 17 and 18.

Oil export tax/charge:
In October, 1973, the federal government imposed a tax on the export of crude oil under the Oil Export Tax Act. This Act was in effect until April 1, 1974. Provisions were made within the Act to make payments to the exporting provinces of 50 percent of tax revenues derived from the export tax. The share of each province was based on a production formula. As of April 1, 1974, the tax became a charge on the export of crude oil and certain petroleum products, under the Petroleum Administration Act. Under this Act, no payments were made to the exporting provinces. The oil export tax/charge is included in federal government revenue as an indirect tax.

Other current transfers from persons to government:
A revenue item for the federal, provincial and local governments, these transfers involve direct remittances from persons to government. They are similar to direct taxes, however, the transfer items are not necessarily related to the ability to pay. They also involve less compulsion and greater freedom of choice than direct taxes. Included in this component are such items as motor vehicle licenses and permits (personal purposes only), contributions to hospital and medical care insurance, game licenses, marriage licenses and fines and penalties.

Paasche Price Indexes:
These are fixed weighted price indexes similar to Laspeyres indexes, only are weighted using the current period as the base year, rather than a pre-set base year (i.e. 1997).

Payments to non-residents:
Payments to non-residents include dividend, interest and business service payments. Business service payments include rent, royalties, advertising, insurance, research and management fees. As explained in the item Miscellaneous Investment Income from Non-Residents, only the Payments to Non-Canadians component is estimated. Net payments to Canadians but non-Albertans is derived residually.

Personal disposable Income:
This equals personal income minus direct taxes and other current transfers to government by persons.

Personal expenditure on consumer goods and services:
Personal consumer expenditure is broken down into the following categories:

(i) Durable Goods -
This item refers to goods obtained by the persons which have an expected long lifetime of use and involve a substantial sum of money to purchase. It includes items such as automobiles, recreation equipment and appliances.

(ii) Non-Durable Goods -
These are "goods" with an expected life-time of less than one year". (SNA, Page 235).

(iii) Semi-Durable Goods -
These are goods which can be used for a period of time of a year or more and do not involve large sums of money to purchase. Included are items such as clothing, footwear, linens and kitchenware.

(iv) Services -
This item covers personal expenditure on a broad variety of services ranging from rent paid and imputed on dwellings to transportation, recreation or personal care services.

Personal Income:
This is a measure of all income received by Albertans. It includes: wages, salaries and supplementary labour income; military pay and allowances; net income of non-farm unincorporated business; net income received by farm operators from farm production (excluding the adjustment on grain transactions); interest, dividends, and miscellaneous investment income and all transfer payments received by persons.

Personal savings:
Savings include the value of physical change in farm inventories and the value of personal (non-farm) savings. They also include the change in book value of unincorporated business inventories.

Personal sector:
This sector comprises the transactions of all individuals, unincorporated businesses and private non-profit organizations resident in Alberta (see Table 7).

Production:
Production is the creation of goods and services on which members of the community, or the community as a whole, set a dollar value. Any process that creates or adds value to already existing goods is production. For example, the activities of labourers and entrepreneurs who produce and sell the entire range of goods and services; the activities of doctors, lawyers, entertainers, dry cleaners and all who provide services to households and businesses; and the activities of government are all production. They, in various ways, create or improve goods and services, and hence add economic value. Also included in production is "income in kind" which refers to such items as the value of food consumed on farms and the imputed value of free lodging provided by employers. Excluded are illegal activities and the sale of previously owned assets. However, any gains or profits in selling used assets or any fees associated with their sale are included in production.

Statistical Discrepancy:
The final estimate of Gross Domestic Product of each year is taken as the average of the

statistical totals of the consolidated income account and the expenditure account. That is, the difference between these two independently estimated totals (the residual) is divided into two halves. To produce an arithmetical balance between the two totals, one half of the statistical discrepancy is added to the lower estimate, and one half is subtracted from the higher estimate. The statistical discrepancy also reflects net Alberta receipts in business services, and freight and shipping transactions with the rest of Canada, as well as flaws in estimation procedures, and discrepancies in the timing with which the income and expenditure data are recorded. Persistently positive (or negative) residuals on one side of the accounts may suggest that there is a systematic, built-in, bias in the estimates. Unfortunately, it is not possible to identify the sources of bias with any degree of certainty.

Subsidies:
An expenditure item of the federal and provincial governments, subsidies represent payments made by governments to business toward current costs of production, whether this is at the producer or distributor level. Subsidies may be made pertaining to agriculture (for example, Canadian Dairy Commission Payments), transportation (such as payments to railways under the National Transportation Act), and communications, among others.

Subsidies on factors of production:
These are the subsidies paid to businesses that are not tied to the value of production. These are subsidies tied to costs of labour, interest and pollution control. They do not include investment assistance payments.

Subsidies on products:
These are subsidies paid by governments on the basis of goods and services sold. These include various agricultural subsidies, electricity and natural gas rebates, and transportation subsidies.

Supplementary labour income:
This covers payments made by employers on behalf of employees and can be considered as payment for the services of employees. It includes employers' contributions to unemployment insurance, welfare funds and workers' compensation.

Undistributed corporation profits:
Undistributed corporation profits is the residual after deducting, from corporation profits before taxes, corporation income tax, dividends paid to non-residents, dividends paid to Canadian residents and current transfers to persons.

Value added:
The value added by an industry is the difference between the gross value of production of that industry less the total value of purchases (including imports) of goods and services from other firms which enter into that industry's production process (i.e., the intermediate goods and services). If we sum the value added figures for all industries in Alberta, we would calculate GDP by industry. This method is not used in these accounts.

Wages and salaries:
This refers to direct payments other than pensions made to employees. It is calculated before deductions are made for contributions to social security, taxes and so on. It also includes income in kind, such as free lodging. Retroactive payments are included in the period of payment rather than in the period of earning. For the years 1981 to current, wages and salaries are now calculated on a province of employment basis for GDP and wages and salaries by industries, and on a province of residence basis for personal income.
